

# Healthy Air In Every Classroom

HEPA Air Purifiers

**We want our children to be safe,** but invisible dangers, such as air pollution in the classroom, affect their health and their academic performance.

**1300 HOURS**

Every year, children spend an average of 1,300 hours in school buildings.

## Schools face challenges in providing healthy indoor air.

Children are particularly vulnerable to harmful airborne contaminants such as microbiological pollutants, allergens, chemicals and ultrafine particles.

Indoor airborne contaminants such as formaldehyde, particulate matter (PM 2.5 and PM 10), carbon monoxide are exceeding recommended international thresholds

# EFFECTIVE PARTICLE AND/OR ODOR FILTRATION

Without an efficient air filtration system, hazardous contaminants remain suspended in the environment for extended periods of time and have a negative impact on health.

Research has shown that even short-term exposure to elevated levels of indoor air contaminants is associated with higher rates of cancer, stroke, heart and respiratory diseases.
